

COVID-19's Impact on the St. Louis Lodging Market

January 21, 2021 / By Daniel P. McCoy, Zabada N. Abouelhana

Amid a worldwide pandemic, the lodging industry is facing a downturn that is greater than the past two lodging-market declines combined. During the Great Recession, Greater St. Louis⁽¹⁾ occupancy fell roughly four points from 59% in 2008 to 55% in 2009. In 2020, occupancy fell from the 2019 benchmark of roughly 65% to 38%, reflecting a 27-point correction. Average daily rate (ADR) declined from \$87 in 2008 to \$82 in 2009, a 6% drop. In 2020, ADR decreased 21% from the rate achieved in 2019 (\$107 to \$85).

St. Louis – 2020-2023 Forecast

	Historical		Estimate	Forecast		
	2018	2019	2020	2021	2022	2023
Occupancy	64.7%	64.8%	38%	51%	62%	65%
Percent Change		0.2%	-41%	35%	21%	4%
Average Rate	\$105.23	\$107.31	\$85	\$93	\$101	\$107
Percent Change		2.0%	-21%	9%	10%	5%
RevPAR	\$68.04	\$69.50	\$32	\$47	\$63	\$69
Percent Change		2.1%	-54%	47%	33%	9%

Major factors contributing to our forecast are summarized as follows:

- On March 23, 2020, St. Louis City and St. Louis County officials implemented stay-at-home orders, imposed limits on gatherings and business activity, and limited travel to essential activities. Hotel demand plummeted in late March, and occupancy remained below 30% throughout April and May 2020. ADR levels also declined by over 35% during that period, as formerly higher-rated corporate, meeting, and event demand evaporated. Although stay-at-home orders were lifted on May 18, 2020, restrictions on business activity and group gatherings have remained in place. While a number of attractions, such as the **St. Louis Zoo** and new **St. Louis Aquarium**, have reopened with limited capacity, large meetings and events continue to be prohibited, including the conventions and public sporting events that typically provide a strong base of demand. Although hotel occupancy levels improved over the summer of 2020 to around 40%, and ADR declines have lessened, overall market performance remains severely impacted, with RevPAR less than half of the 2019 level.
- As of late 2020, the number of room nights expected to be generated by conventions in 2020 was down approximately 88% from 2019. Representatives of the **America's Center Convention Complex** are tentatively projecting a modest recovery in 2021. Restrictions on large public gatherings have caused cancellations, postponements, and modifications through the first half of 2021. However, officials reported success in rescheduling canceled events for the second half of 2021 and beyond; the convention calendar for 2022 and 2023 should support a strong and swift recovery for the downtown market during those years. Furthermore, in September 2020, funding for \$175 million in renovations and upgrades to the center was secured. The **AC Next Gen** project, which is planned for completion in 2023, is anticipated to include a new ballroom, expanded exhibit space, additional service space and loading docks, and exterior enhancements.
- A stronger market is expected for the summer of 2021, relative to 2020, as the nation is anticipated to

Summary

Since early March of 2020, Greater St. Louis-area hotels have suffered unprecedented declines in demand, similar to most cities in the United States, because of the COVID-19 pandemic. How far has the greater St. Louis hotel market fallen? How does this compare to the last recession? What will the recovery look like?

emerge from pandemic restrictions and the distribution of vaccines should be widespread. Greater St. Louis had realized occupancies in the low 40% range by the end of the summer in 2020 (up from the April and May lows in the 20s); we expect summer 2021 occupancy levels to reach the low 60s across the St. Louis market. In the years immediately prior to the pandemic, Greater St. Louis experienced occupancy in the low-to-mid 70s, on average, during the peak summer season; the market is forecast to recover to that normalized level by 2023. As consumer sentiment and confidence improves, new attractions, including the MLS stadium and St. Louis Aquarium, should help attract regional visitation.

- Assuming that meeting and social-distancing restrictions are eased by mid-year 2021, corporate demand is expected to rebound relatively swiftly in the following twelve months. Although elevated unemployment levels and general economic recovery may present some headwinds, we anticipate that pent-up demand for client meetings and in-person training will foster a healthy rebound in the region's commercial demand base. Overall, the market's diversity of employment sectors, with concentrations in healthcare, education, government, financial services, life sciences, and aerospace, should provide a strong base for economic recovery, allowing commercial demand to recover by 2023.
- Within the greater market, the impact of the pandemic on individual hotels and the outlook for recovery spans a wide spectrum. In general, the area's budget/economy and extended-stay hotels have been less affected than other hotel types, showing some resiliency due to their typical demand bases. Hotels that have been able to maintain a somewhat stable demand mix have typically experienced more limited rate declines. On the other hand, full-service properties, particularly those in the urban core, have generally experienced the most severe effects of the downturn, due primarily to these properties' reliance on demand from corporate sources and group events, which have been most severely limited. These hotels have been forced to discount rates to attract demand from leisure travelers and lower-rated commercial accounts. As demand from corporate sources and large events returns, full-service hotels, and the market in general, should experience strong ADR recovery.
- The transactions market has virtually ground to a halt in Greater St. Louis, with just two closed transactions since March. The former Drury Inn & Suites in Maryland Heights/Westport sold in March 2020; the buyer converted the hotel to a **SureStay Plus by Best Western**. Additionally, the Holiday Inn Express in Earth City/Riverport sold in August 2020.

While the St. Louis hotel market has not escaped the severe impact of the COVID-19 pandemic, it is well positioned for a healthy recovery once the pandemic is suppressed, group restrictions are relaxed, and corporate travel resumes. We continue to monitor the various factors influencing the outlook for the St. Louis lodging market, including regular conversations with participants in the regional market.
